                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a combination comprising cDNAs that are differentially expressed in dendritic cells (DC). Also included is a hig throughput method for detecting differential expression of one or more cDNAs in a sample containing nucleic acids. The combination is useful for preparing a composition for diagnosing, treating and monitoring the treatment of cancer, infectious disease, autoimmunity, allergy or graft versus host disease, or for enhancing a vaccine. The present sequence represents a human cDNA upregulated in dendritic cells. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030134283.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          treating cancer, incoversus host disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New combination comprises cDNAs that are differentially expressed in dendritic cells useful for preparing a composition for diagnosing or treating cancer, infectious disease, autoimmunity, allergy or graft

Claim 1; SEQ ID NO 1079; 10078pp; English

The invention relates to human nucleic acids (AAI57798-AAI61369) and the CC encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful CC in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and CC system, such as peripheral nervous injuries, peripheral neuropathy and CC localised neuropathies and central nervous system diseases, such as CC Alzheimer's, Parkinson's disease, Huntington's diseases, such as CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the CC utilisation of the activities such as: Immune system suppression, CC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic caseays for receptor activity, cancer disgnosis and therapy, drug screening, CC assays for receptor activity, arthritis and inflammation, leukaemias and CC C.N.S disorders. Note: The sequence data for this patent did not form CC part of the printed specification

The invention describes an isolated polynucleotide (I) comprising a ful defined (S1) of 749, 3188, 2484, 1169, 2936, 1467, 5773, 5714, 4041, 1372, 3996, 3945, 2735, 1788, 585, 1782, 927, 5714 or 2282 nucleotides given in the specification, its translated or protein coding portion, i extracellular portion or its active domain. The GPCR-like polypeptides and polynucleotides are useful for the treatment of diseases of ophthalmic, neurological, immunological and nephritic systems. They may also be used to treat hormonal dysfunction, cancer, atherosclerosis and diabetes. The antibodies are useful for detecting or quantitating the ey may is and the fully

The polynucleotide is useful for treating diseases e.g. cancer or neurodegenerative diseases and many others listed in the specification. The present sequence represents a novel human cDNA. The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from U at sequance.html?DocID=20030104529.

                                                                                                                                        The present sequence is that of Incyte clone 7483131CB1 encoding human CCDD-19, a novel protein associated with cell growth, differentiation and death. A representative cDNA library for the polynucleotide is KIDNNOT19 derived from kidney tissue. Structural features establish the encoded protein as being associated with cell growth, differentiation and death, and as showing sequence and structural similarity to human apoptotic protease activating factor 1. The invention is based on novel human CGDD-1 to -21 proteins (see ABP59330-50), the polynucleotides encoding them (see ABP59330-50), the polynucleotides encoding them (see ABP24689-709), and to the use of these for the diagnosis, treatment or prevention of cell proliferative disorders including cancer, developmental disorders, neurological disorders, autoimmune disorders, reproductive disorders, and disorders of the placenta, and in the assessment of the effects of exogenous compounds on the activity and expression of proteins and nucleic acids associated with cell growth, differentiation and death. CGDD polynucleotides are also used in a claimed method of generating an expression profile of a sample
                                                                           Query Match

CC polypeptides. Also claimed is a polypeptide encoded by the polynucleotide or its partial peptide, an antibody binding to the polypeptide or peptide cof the polynucleotide, immunologically assaying the polypeptide or peptide cof peptide of the polynucleotide, immunologically assaying the polypeptide or peptide cof peptide of the polynucleotide of the polynucleotide in an occasion of the antibody of the encoded protein, and observing the binding compressible manner and an antisense polynucleotide. The oligonucleotide is useful as a primer for synthesising the polynucleotide, or as a probe compressible manner and an antisense polynucleotide and encoded compressible manner and an antisense polynucleotide and encoded compressions are useful as pharmaceutical agents and many disease-related compression and activity, or as targets of genes may be included in them, for developing a diagnostic marker or complete the complete of their expression and activity, or as targets of genes may be included in them, for developing a diagnostic marker or complete the complete of their expression and activity, or as targets of genes may be included in them, for developing a diagnostic marker or complete the complete of their expression and activity, or as targets coffice encoding them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The complete complete is cDNA of the invention. Note: Some of the sequence complete is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer has metastazed in a patient; (d) determining whether prostate cancer has metastazed in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel isolated nucleic acid molecule associated with cancerous state prostate cells and correlating with presence of prostate cancer, usef for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1996 BP; 615 A; 378 C; 447 G; 543 T; 0 U; 13 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2001-662795/76.

                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cell carcinogenic potential of a compound; (g) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acid molecule associated with cancerous suppostate cells and correlating with presence of prostate cancer, for detecting presence of prostate cancer, stage of prostate cancer.
                                                                                                                                                                                                                                                                                                                           Sequence 1996 BP; 615 A; 378 C; 447 G; 543 T; 0 U; 13 Other;

New human, mouse or rat RET16 genes and proteins, involved in intracellular signaling cascade, useful for in gene therapy, part for treating e.g. ischemia, cystic fibrosis, autoimmune disease, tumors or neoplasms. particularly

Page 168-169; 175pp; English

The invention relates to human, mouse or rat RET16 genes and proteins, involved in intracellular signaling cascade. The RET16 protein or polymucleotide is useful for treating an inflammation-related disease or disorder, e.g. rheumatoid arthritis, juvenile arthritis, psoriasis, asthma, ischaemia-reperfusion, multiple sclerosis, rejection of organ or tissue transplants, chronic obstructive pulmonary disease, inflammatory bowel disease, crohn's disease, ulcerative colitis, inacute respiratory distress syndrome, systemic lupus erythematosus, autoimmune disease, cystic fibrosis, cancers, tumours or neoplasms. This inflammation-related disease or disorder also includes disorders associated with aberrant activation of the TNF-alpha pathway, disorders associated with aberrant

                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to human nucleic acids (AAI57798-AAI61369) and the CC encoded polypeptides (AAM38642-AAM42213) with nootropic, CC immunosuppressant and cytostatic activity. The polypucleotides are useful CC in gene therapy. A composition containing a polypeptide or polynucleotide CC of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and CC localised neuropathies and central nervous system diseases, such as CC Alzheimer's, Parkinson's disease, Huntington's diseases, such as CC alzheimer's, Parkinson's disease, Huntington's diseases, amyotrophic CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the CC utilisation of the activities such as: Immune system suppression, CC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic CC and thrombolytic activity, cancer diagnosis and therapy, drug screening, CC assays for receptor activity, arthritis and inflammation, leukaemias and CC C.N.S disorders. Note: The sequence data for this patent did not form CX part of the printed specification
                                                                                                                                                                                                                                                                                                                                                    Query Match

The nucleic acids and proteins encoded by them are used to crabbits, goats, horses, cate, dogs, chickens or sheep. They are also used to in diagnosing a pathological condition or susceptibility to a gathological condition or susceptibility to a pathological condition or susceptibility to a gathological condition or susceptibility to a condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic (communoassays e.g. radioimmunoassays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune (companies of the breast or liver, cardiovascular disorders e.g. cardiac necessary of the breast or liver, cardiovascular disorders e.g. cardiac carcet, cerebrovascular disorders e.g. cardiac correct, cerebrovascular disorders e.g. cardiac correct, viruses and fungi and ocular disorders e.g. corneal infection. CC nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. CC cell proliferation, to prevent skin aging due to subburn, to maintain corgans before transplantation, for supporting cell culture of primary ctissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease corresponds to a gene of the converse corresponds to a gene of the converse corresponds to a gene of the converse corresponds to a gene of the correct corre

This inflammation-related disease or disorder also includes disorders associated with aberrant activation of the TNF-alpha pathway, disorders associated with aberrant cellular migration, proliferation, metastasis, juvenile idiopathic arthritis, haematogenous metastases of tumour cells, hyperinsulinaemia, diabetes type 2, atherosclerosis, cardiovascular disease, colon cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           transplant rejection; chronic obstructive pulmonary disease; TNF-alpha; inflammatory bowel disease; Crohn's disease; immunosuppressive; cancer; inacute respiratory distress syndrome; cardiant; ulcerative colitis; autoimmune disease; cystic fibrosis; gene therapy; cytostatic; neoplasm; cellular migration disorder; cell proliferation disorder; calcification; hyperinsulinaemia; diabetes type 2; systemic lupus erythematosus; tumour; cardiovascular disease; Wegener's granulomatosis; atherosclerosis;
                                                                                                                                                                                                  tumour progression, Wegener's granulomatosis, stem cell transplantation complications, ischaemia-reperfusion injury, thalassaemia, acute lung injury, graft rejection, ischaemic heart, coronary artery calcification or allergic inflammation. RET16 DNA is used in gene therapy. The present sequence is human RET16 open reading frame (ORF) DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to human, mouse or rat RET16 genes and proteins, involved in intracellular signaling cascade. The RET16 protein or polynucleotide is useful for treating an inflammation-related disease disorder, e.g. rheumatoid arthritis, juvenile arthritis, psoriasis,
                                                                                                                                                                                                                                                                                                                                                                                                                                    polynucleotide is useful for treatin disorder, e.g. rheumatoid arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human, mouse or rat RET16 genes and proteins, involved in intracellular signaling cascade, useful for in gene therapy, par for treating e.g. ischemia, cystic fibrosis, autoimmune disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Todderud
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  16-FEB-2001;
29-MAY-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                15-FEB-2002;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WO200266494-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (BRIM ) BRISTOL-MYERS SQUIBB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sapiens.

Novel isolated nucleic acid molecule associated with cancerous state prostate cells and correlating with presence of prostate cancer, used for detecting presence of prostate cancer.

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00101-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer has metastatized in a patient; (f) assessing the aggressiveness or indolence of prostate cancer in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient.

                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer has metastatized in a patient; (g) determining whether prostate cancer has metastatized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient in a patient; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel isolated nucleic acid molecule associated with cancerous state prostate cells and correlating with presence of prostate cancer, usef for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; prostate pharmacogenomic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is that of Incyte clone 7483131CB1 encoding human CC CGDD-19, a novel protein associated with cell growth, differentiation and CC GGD-19, a novel protein associated with cell growth, differentiation and CC death. A representative CDNA library for the polynucleotide is KIDNNOT19 CC derived from kidney tissue. Structural features establish the encoded protein as being associated with cell growth, differentiation and death, CC and as showing sequence and structural similarity to human apoptotic CC protease activating factor 1. The invention is based on novel human CGDD-CC 1 to -21 proteins (see ABP58330-50), the polynucleotides encoding them CC (see ABZ24689-709), and to the use of these for the diagnosis, treatment CC crevention of cell proliferative disorders including cancer, CC developmental disorders, neurological disorders, autoimmune disorders, corproductive disorders, and disorders of the placenta, and in the CC assessment of the effects of exogenous compounds on the activity and CC expression of proteins and nucleic acids associated with cell growth, CC claimed microarray and in a claimed method of generating an expression of companion of the companion of the placenta and an expression of claimed microarray and in a claimed method of generating an expression of companion of the companion of companion of the companion 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim

                                                                                                                                                                                                                                                              The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel CC polypeptides. Also claimed is a polypeptide encoded by the polynucleotide CC or its partial peptide, an antibody binding to the polypeptide or peptide CC of the polynucleotide, immunologically assaying the polypeptide or peptide CC with the antibody of the encoded protein, and observing the binding CC with the antibody of the encoded protein, and observing the binding CC expressible manner and an antisense polynucleotide. The oligonucleotide CC is useful as a primer for synthesising the polynucleotide, or as a probe CC for detecting the polynucleotide. The polynucleotide CC genes may be included in them, for developing a diagnostic marker or CC medicines for regulation of their expression and activity, or as targets CC of gene therapy. The genes are involved in tissue and/or cell CC regeneration. Membrane proteins, signal transduction-related genes cenceding them can be used as indicators for diseases (e.g. osteoporosis, curvanscription-related proteins, disease-related proteins and genes cenceding them can be used as indicators for diseases (e.g. osteoporosis, the activity or expression of the encoded protein to treat diseases. The sequence presented is a cDNA of the invention. Note: Some of the sequence code data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     05-NOV-2001;

                                                                                                                     The invention relates to a combination comprising cDNAs that are differentially expressed in dendritic cells (DC). Also included is a high throughput method for detecting differential expression of one or more cDNAs in a sample containing nucleic acids. The combination is useful for preparing a composition for diagnosing, treating and monitoring the treatment of cancer, infectious disease, autoimmunity allergy or graft versus host disease, or for enhancing a vaccine. The present sequence represents a human cDNA upregulated in dendritic cells. Note: The sequence sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030134283.
                                                                                                                                                                                                                                                                                                                                                                             New combination comprises cDNAs that dendritic cells useful for preparing treating cancer, infectious disease, versus host disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ss; gene; human; dendritic cells; high throughput;

> Novel nucleic acids and polypeptides, central nervous system injuries useful for treating disorders such

ŏ 1079;

The invention relates to human nucleic acids (AAI57798-AAI61369) and the CC encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous containing a polypeptide or polynucleotide of the invention may be used to treat diseases, beripheral nervous and containing a polypeptide or polynucleotide of the peripheral nervous system disease, such as contained and contained and containing and system suppression, and system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and contained specification contains patent did not form the printed specification.
